

PC, DVI INTERFACE CONTROLLER FOR TFT PANEL

Model: ALR-1400

Part number : 41710003X/4X-3 or up

INSTRUCTIONS

CONTENTS

It is essential that these instructions are read and understood before connecting or powering up this controller.

Revision History

Date	Rev No.	Page	Summary
10 Sept 2015	1.00	All	Features added for up to P/N 417100042-3
4 March 2016	2.00	8	Add feature done on V1.97.00 firmware to implement the direct access key for Backlight Brightness increase & decrease.
		11, 18	Revised the connector type used on CN8, CNA1, CNB2 & CNC1 on the document.
		14	Add more panel support implemented start from V1.97.00 firmware.
		27	Add new RS-232 command for "Sharpness", "OSD menu timeout", "Gamma" & "Wide screen mode selection" done start from V1.97.00 firmware.
8 July 2016	2.01	2	Move the "Revision History" section to page 2 for better presentation.
		27-28	Revised the range of Backlight Brightness Control RS-232 command (0xe0)

Introduction

Designed for LCD monitor and other flat panel display applications, the ALR-1400 controller provides easy to use interface controller for:

- TFT (active matrix) LCDs with LVDS interface of 1400x900, 1366x768, 1280x1024, 1280x800, 1280x768, 1024x768, 1024x600, 800x600, 800x480, 640x480, 480x234 resolution;
- Computer video signals of SXGA, XGA, SVGA, VGA standard
- Support LVDS or TTL interface panel

Ordering information :

Controller	Part number	Ordering part number
ALR-1400	P/N 41710004X-3	P/N 4171000XX-3

HOW TO PROCEED

- Ensure you have all parts & that they are correct, refer to:
 - Connection diagram (separate document for each panel)
 - Connector reference (in following section)
 - Assembly notes
- Check controller switch & jumper settings (errors may damage the panel)
- Prepare the PC
- Connect the parts
- Understand the operation and functions (in following section)

IMPORTANT USAGE NOTE

This product is for use by system developers and integrators, the manufacturer accepts no liability for damage or injury caused by the use of this product. It is the responsibility of the developer, integrators or other user of this product to:

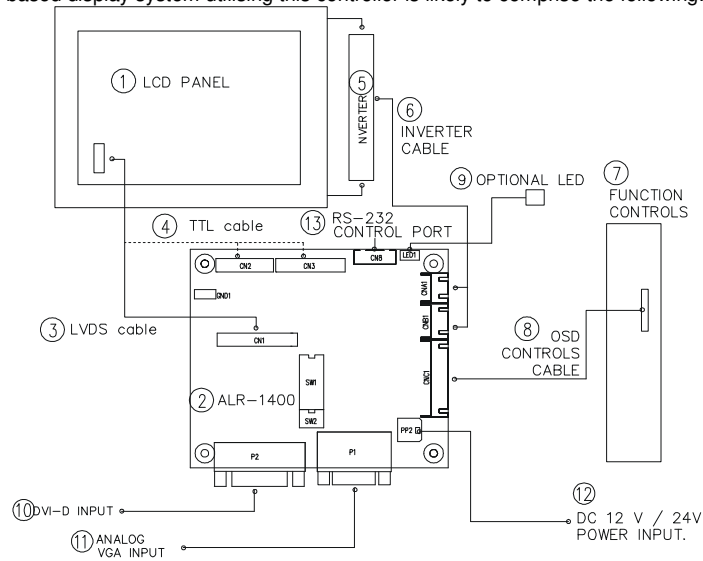

- Ensure that all necessary and appropriate safety measures are taken.
- Obtain suitable regulatory approvals as may be required.
- Check power settings to all component parts before connection.
- Understand the operation and connectivity requirements of this controller.

DISCLAIMER

There is no implied or expressed warranty regarding this material.

SYSTEM DESIGN

A typical LCD based display system utilising this controller is likely to comprise the following:

Summary:

1. LCD panel
2. LCD controller card, ALR-1400
3. LVDS cable (for connection with LVDS panel)
4. TTL cable (for connection with TTL panel)
5. Inverter for CCFT backlight (if not built into LCD)
6. Inverter cable
7. Function controls
8. Function controls cable
9. Status LED
10. DVI-D input
11. Analog VGA input
12. Power input (12VDC / 24VDC)
13. RS-232 control port

Digital View offers a range of accessories such as listed above, to make up complete display solution.

ASSEMBLY NOTES

This controller is designed for monitor and custom display projects using 1440x900, 1366 x 768, 1280 x 1024, 1280 x 800, 1280 x 768 or 1024 x 768, 1024 x 600, 800 x 600, 800 x 480, 640 x 480 or 480 x 234 resolution TFT panels with a VGA, SVGA, XGA, SXGA signal input. The following provides some guidelines for installation and preparation of a finished display solution.

Preparation: Before proceeding it is important to familiarize yourself with the parts making up the system and the various connectors, mounting holes and general layout of the controller. As much as possible connectors have been labeled. Guides to connectors and mounting holes are shown in the following relevant sections.

1. **LCD Panel:** This controller is designed for typical LVDS or TTL interface TFT panels with panel voltage 3.3V or 5V or 12V or 18V LVDS interface. Due to the variation between manufacturers of signal timing and other panel characteristics factory setup and confirmation should be obtained before connecting to a panel. (**NOTE: Check panel power jumper settings before connection**)
2. **Controller card:** Handle the controller card with care as static charge may damage electronic components.
3. **LVDS signal cable :** In order to provide a clean signal it is recommended that LVDS signal cables are no longer than 46cm (18 inches). If loose wire cabling is utilized these can be made into a harness with cable ties. Care should be taken when placing the cables to avoid signal interference. Additionally it may be necessary in some systems to add ferrite cores to the cables to minimize signal noise.
4. **TTL signal cable:** In order to provide a clean signal it is recommended that LCD signal cables are no longer than 33cm (13 inches). If loose wire cabling is utilized these can be made into a harness with cable ties. Care should be taken when placing the cables to avoid signal interference. Additionally it may be necessary in some systems to add ferrite cores to the cables to minimize signal noise.
5. **Inverter:** This will be required for the backlight of an LCD, some LCD panels have an inverter built in. As panels may have 1 or more backlight tubes and the power requirements for different panel models backlights may vary it is important to match the inverter in order to obtain optimum performance. See page 15 for the Application notes "Inverter connection section for more informations.
6. **Inverter Cables:** Different inverter models require different cables and different pin assignment. Make sure correct cable pin out to match the inverter. Using wrong cable pin out may damage the inverter.
7. **Function Controls:** The following section discusses the controls required and the section on connectors provides the detail. The controls are minimal: On/Off, Backlight Brightness (depends on inverter), OSD (5 momentary buttons) analog VR type or (8 momentary buttons) digital type.
8. **Function controls cable:** The cables to the function switches should be of suitable quality and length so that impedance does not affect performance. Generally lengths up to 1 metre (3 feet) should be acceptable.
9. **DVI-D Input Cable :** Plug the DVI-D cable to the connector P2 on the controller board
10. **Analog VGA Input Cable:** As this may affect regulatory emission test results and the quality of the signal to the controller, a suitably shielded cable should be utilized.
 - **Power Input:** 12V / 24V DC is required, this should be a regulated supply. Although the controller provides power regulation for the LCD power this does not relate to the power supplied to the backlight inverter. If an unregulated power supply is provided to an inverter any fluctuations in power may affect operation, performance and lifetime of the inverter and or backlight tubes.
24VDC input is required when the panel output voltage is 18VDC. Please refer to page 10-11 for proper jumper settings.
 - **Power Safety:** Note that although only 12VDC / 24VDC is supplied as 'power-in' a backlight inverter for panel backlighting produces significantly higher voltages (the inverter does not connect to the ground plane). We strongly advise appropriate insulation for all circuitry.
 - **EMI:** Shielding will be required for passing certain regulatory emissions tests. Also the choice of external Controller to PC signal cable can affect the result.
 - **Ground:** The various PCB mounting holes are connected to the ground plane.
 - **Servicing:** The board is not user serviceable or repairable. Warranty does not cover user error in connecting up to the controller and is invalidated by unauthorized modification or repairs.
 - **Controller Mounting:** It is recommended that a clearance of at least 10mm is provided above and 5mm below the controller when mounted. Additionally consideration should be given to:
 - Electrical insulation.
 - Grounding.
 - EMI shielding.
 - Cable management. Note: It is important to keep panel signal cables apart from the inverter & backlight cables to prevent signal interference.
 - Heat & Ventilation: Heat generated from other sources, for example the backlight of a very high brightness panel may generate significant heat which could adversely affect the controller.

Specifications subject to change without notice

- Other issues that may affect safety or performance.
- **PC Graphics Output:** A few guidelines:
 - Signal quality is very important, if there is noise or instability in the PC graphics output this may result in visible noise on the display.
 - Refer to graphics modes table in specifications section for supported modes.
 - Non-interlaced & interlaced video input is acceptable.

IMPORTANT: Please read the Application Notes section for more information.

CONNECTION & OPERATION

CAUTION: Never connect or disconnect parts of the display system when the system is powered up as this may cause serious damage.

CONNECTION

Connection and usage is quite straight forward (it is useful to have the relevant connection diagram available at this time):

1. **LCD panel & Inverter:** Connect the inverter (if it is not built-in the panel) to the CCFT lead connector of the LCD panel.
2. **LVDS type panels:** Plug the LVDS signal cable direct to CN1 (if necessary). Insert the panel end of the cable to the LCD panel connector.
3. **TTL type panels:** Plug the signal cables direct to CN2 or CN3. Plug the other end of cables to the LCD connector board (if connector board is required, otherwise the signal can be direct plug to the LCD panel connector). Then plug the board connector to the LCD panel connector.
4. **Inverter & Controller:** Plug the inverter cable to CNB1 and CNA1 (if necessary). Plug another end to the connector on the inverter.
5. **Function switch & Controller:** Plug the OSD switch mount cable to CNC1 on the controller board and another to the OSD switch mount.
6. **LED & Controller:** Plug in a 3-way with dual colour LED to connector LED1 on the controller board.
7. **Jumpers :** Check all jumpers are set correctly. Details referring the connection diagram at <http://www.digitalview.com/controllers/csg.php>
8. **Jumpers & Inverter & Panel voltage:** Particularly pay attention to the settings of JA3, JA6, JB2, JB3. JB2 & JB3 are used for inverter control (read inverter specification and information on the jumper table to define the correct settings). JA3 & JA6 are used for panel voltage input (read panel specification and information on the jumper table to define the correct settings).
9. **DVI cable :** Plug the DVI-D cable to the connector P2 on the controller board.
10. **VGA cable & Controller:** Plug the VGA cable to the connector P1 on the controller board.
12. **Power supply & Controller:** Plug the DC 12V / 24V power in to the connector PP2. You can consider to use DigitalView mating power cable P/N 426013800-3, 160mm.
13. **Power on:** Switch on the controller board and panel by using the OSD switch mount.

CAUTION: Never connect or disconnect parts of the display system when the system is powered up as this may cause serious damage.

LED status :

State	LED color
No signal & backlight off	RED
No signal & backlight on	ORANGE
With signal & backlight on	GREEN

General:

- If you are using supplied cables & accessories, ensure they are correct for the model of panel and controller.
- If you are making your own cables & connectors refer carefully to both the panel & inverter specifications and the section in this manual, "Connectors, Pinouts & Jumpers" to ensure the correct pin to pin wiring.

PC SETTINGS

The controller has been designed to take a very wide range of input signals however to optimize the PC's graphics performance we recommend choosing 60Hz vertical refresh rate – this will not cause screen flicker.

OPERATION

Once the system has been connected and switched on there are a number of functions available to adjust the display image as summarized in the following sections. The settings chosen will be saved for each mode independently.

LCD DISPLAY SYSTEM SETTINGS

NOTE: By way of explanation the following refers to a set of sample buttons that may be obtained as an option. In addition to power on/off and connection for backlight brightness the controller provides an On Screen Display of certain functions which are controlled by 5 momentary type buttons (analog VR type) or 8 momentary type buttons (digital type):

Controls	Analog VR type	Digital type
On/Off – turns controller board power on	VR toggle switch	On/Off button
Brightness – controls backlight brightness	Rotary VR	Brightness +/- buttons
Menu – turns OSD menu On or Off (it will auto time off) (Function with signal input only)	Menu button	Menu button
Select – Select function / Confirm (under OSD menu on state)	SEL DN	SEL DN
Move up to select individual RGB color level OSD page (under OSD menu on state)	SEL UP	SEL UP
+ – increase the setting / moves the selector to the next function (under OSD menu on state)	+	+
- - decrease the setting / moves the selector to the previous function (under OSD menu on state)	-	-
Reset to Factory Defaults	Press and hold SEL DN button, then power on the controller	Press and hold SEL DN button, then power on the controller
Lock OSD menu (Function with signal input only)	Press and hold MENU button for 15 seconds to enable / disable lock of the OSD menu	Press and hold MENU button for 15 seconds to enable / disable lock of the OSD menu
Direct access key for Brightness level increase (under OSD menu off state)	+	+
Direct access key for Brightness level decrease (under OSD menu off state)	-	-
Direct access key for Backlight Brightness increase [#] (under OSD menu off state)	SEL UP	SEL UP
Direct access key for Backlight Brightness decrease [#] (under OSD menu off state)	SEL DN	SEL DN

- Only effective on V1.97.00 or up version.

Analog VR type

Digital type

12V / 24VDC power input :
Analog 10K VR Type OSD switch mount uses P/N 410680550-3 or up

12V / 24VDC power input :
Digital 10K Type OSD switch mount uses P/N 416100520-3 or up

12VDC power input :
Digital 10K Type OSD switch mount uses P/N 416100510-3

OSD Functions

Select input source			
	Input source 1	Select input source to Analog RGB	
	Input source 2	Select input source to DVI	
	Auto	Auto Source Seek ON – Auto source select always enable OFF – Disable auto source select function	
	Wide screen mode information display*	Select the input mode (1280 / 1360 / 1366 / 1368) to recognize and display the correct input signal information display on the OSD menu. 1280 : 1280x768 1360 : 1360x768 1366 : 1366x768 1368 : 1368x768	

	Exit	Exit the OSD menu and save the settings
Brightness and Contrast		
	Brightness	Increase/decrease brightness level. Press – or + (- <input type="text"/> +) Total : 256 steps
	Contrast	Increase/decrease panel contrast level. Press – or + (- <input type="text"/> +) Total : 192 steps
	Backlight ▾	
	Invert	B/L Invert : Invert for the backlight brightness
	Control	D/A / PWM : Selection for voltage level dimming control / PWM dimming control
	Frequency	Backlight frequency 100 ~ 440Hz in a step of 20
	B/L	Backlight brightness adjustment
	Exit	Exit the OSD menu and save the settings
Color		
	Auto RGB Calibration*	<input checked="" type="checkbox"/> Yes <input checked="" type="checkbox"/> No (Auto Color Calibration [See appendix IV])
	Color Temperature ▾	(Adjust the warmth of the image displayed. The higher temperature the coolest image looks like. The lower temperature the warmest image looks like.)
		Adjust red color level Press – or + (- <input type="text"/> +) Total :128 steps Adjust green color level Press – or + (- <input type="text"/> +) Total : 128 steps Adjust blue color level Press – or + (- <input type="text"/> +) Total : 128 steps Press SEL UP/DN button to select item
		Set the color temperature to 4200K
		Set the color temperature to 5000K
		Set the color temperature to 6500K
		Set the color temperature to 7500K
		Set the color temperature to 9300K
	Gamma adjustment ▾	Adjust Gamma settings (0.4 / 0.6 / 1.0 / 1.6 / 2.2)
		Select Gamma to 0.4
		Select Gamma to 0.6
		Select Gamma to 1.0
		Select Gamma to 1.6
		Select Gamma to 2.2
	Exit	Exit the OSD menu and save the settings
Position		
	Autosetup*	Auto adjust the positions, phase, frequency <input checked="" type="checkbox"/> Yes <input checked="" type="checkbox"/> No
	Frequency*	Adjust the image horizontal size
	Phase*	Fine tune the data sampling position (adjust image quality)
	Image Horizontal Position*	Use +/- to move the image horizontally Press – or + (- <input type="text"/> +)

	Image Vertical Position*	Use +/- to move the image vertically Press – or + (- <input type="text"/> +)
	Exit	Exit the OSD menu
Utilities		
	OSD setting ▶	
		OSD Timeout : 0 / 10 / 20 / 30 / 40 / 50 / 60 seconds (Always on when set to 0) Press – or + (- <input type="text"/> +)
		OSD menu horizontal position Press – or + (- <input type="text"/> +)
		OSD menu vertical position Press – or + (- <input type="text"/> +)
	Load Factory Default	Initialize the setting stored in non-volatile memory
	Sharpness	Adjust sharpness level Press – or + (- <input type="text"/> +) Total : 7 steps
	Exit	Exit the OSD menu
Exit the OSD menu		

[Firmware version : V1.91 or up]

* Function in ARGB mode only

Items marked ▶ have sub menus.
Exit the OSD menu to save the setting chosen

CONNECTORS, PINOUTS & JUMPERS

The various connectors are:

Summary: Connectors

Ref	Purpose	Description
CN1	LVDS panel signal	Hirose 40-pin, DF13-40DP-1.25DSA (Mating type : DF13-40DS-1.25C)
CN2	TTL panel signal	Hirose 40-pin, DF20G-40DP-1V (Mating type : DF20A-40DS-1C)
CN3	TTL Panel signal	Hirose 50-pin, DF20G-50DP-1V (Mating type : DF20A-50DS-1C)
CN8	Serial control (for firmware programming or RS-232 control use only)	JST 6-way, B6B-XH-A or compatible (Mating type : XHP-6 or compatible)
CNA1	Auxiliary power output	JST 4-way, S4B-XH-A or compatible (Mating type : XHP-4 or compatible)
CNB1	Backlight inverter	JST 5-way, S5B-XH-A or compatible (Mating type : XHP-5 or compatible)
CNC1	Function controls	JST 12-way, S12B-XH-A or compatible (Mating type : XHP-12 or compatible)
LED1	Dual color LED connector	Header pin 3x1
P1	ARGB signal input	DB-15 way high density 3 row
P2	DVI-D signal input	DVI-D connector
PP2	Power input	Molex 43650-0200 or compatible (Mating type : Molex 43645-0200 compatible) (Matching power cable : P/N 426013800-3)

Summary: Jumpers setting

Ref	Purpose	Note
JA2	On board +5V power enable	1-2 & 3-4 closed, factory set, do not remove
JA3	Panel power voltage select	See panel voltage setting table 1 CAUTION: Incorrect setting will cause panel damage
JA6	Panel power voltage select	See panel voltage setting table 1 CAUTION: Incorrect setting will cause panel damage
JB2	Backlight inverter on/off control – signal level	1-2 = On/Off control signal 'High' = +12V / +24VDC 2-3 = On/Off control signal 'High' = +5V Open = On/Off control signal 'High' = Open collector CAUTION: Incorrect setting can damage inverter.
JB3	Backlight inverter on/off control – polarity	1-2 = control signal 'high' = CCFT ON 2-3 = control signal 'low' = CCFT ON
JP2	Backlight control type selection	1-2 = VR/Digital switch mount control 3-4 = Analog backlight brightness controlled by RS-232 – voltage range 0-5V 5-6 = PWM (Pulse Width Modulation) brightness
JP6	Input power control	Short = External switch control Open = Switch mount control
JP7	Reserved	Reserved for internal programming use (Always 1-2 closed)
JP8	Clock phase (Analog RGB)	1-2 = Normal 2-3 = Invert
JP9	Reserved	1-2 = Default
SW1	Panel selection	See table below
SW2	Panel selection	See table below

Table 1 : Panel voltage setting table :

Input voltage via PP2	Panel Voltage	JA3	JA6	Jumper on board
12VDC	3.3V	3V3 closed	1-3 & 2-4	
	5V	5V closed	1-3 & 2-4	
	12V	OPEN	5-7 & 6-8	

CAUTION: Incorrect setting can damage panel & controller

Input voltage via PP2	Panel Voltage	JA3	JA6	Jumper on board
24VDC**	3.3V	3V3 closed	1-3 & 2-4	
	5V	5V closed	1-3 & 2-4	
	12V	12V closed	3-5 & 4-6	
	18V	18V closed	3-5 & 4-6	

**** Please make sure the backlight inverter must support 24V supply. Because CNA1 pin 1 and CNB1 pin 2 will output 24VDC if input 24VDC via PP2.**

JA3 & JA6 location on board : (Please pay attention to the jumper settings on JA3 & JA6 which are red in color on board)

Specifications subject to change without notice

For additional and recent added panels, see ALR-1400 panel support table at <http://www.digitalview.com/controllers/csg.php>

- (1) Only effective on V1.31 or up version.
- (2) Only effective on V1.61.00 or up version.
- (3) Only effective on V1.76.00 or up version.
- (4) Only effective on V1.80.00 or up version.
- (5) Only effective on V1.84.00 or up version.
- (6) Only effective on V1.91.00 or up version.
- (7) Only effective on V1.97.00 or up version.
- (a) Display at most output a 480x260 image when inputting 640x480 input resolution.
- (b) Support 640x480 input resolution only come from ARGB & DVI. The vertical size will not fit for 800x600 resolution input.
- (c) Flicker image is present when making image UP position adjustment in the OSD menu.
- (d) One horizontal line miss on screen.
- (e) Other input modes out of 1024x768 resolution at DVI and all VGA modes are not support in this firmware version

41	HS	Horizontal sync
42	DE	Display enable
43	PWR	Power down control signal (5v TTL)
44	VLCD	Panel power supply (3,3V/5V) (selected by JA3 & JA6)
45	VLCD	Panel power supply (3,3V/5V) (selected by JA3 & JA6)
46	VLCD	Panel power supply (3,3V/5V) (selected by JA3 & JA6)
47	NC	No connection
48	VLCD12/18	+12V/18V panel supply (selected by JA3 & JA6)
49	VLCD12/18	+12V/18V panel supply (selected by JA3 & JA6)
50	VLCD12/18	+12V/18V panel supply (selected by JA3 & JA6)

CN8 – RS-232 serial control: JST B6B-XH-A or compatible (Mating type : XHP-6 or compatible)

PIN	SYMBOL	DESCRIPTION
1	SDATA	Reserved
2	SCLK	Reserved
3	VCC	+5V
4	TXD	RS-232 Tx data
5	GND	Ground
6	RXD	RS-232 Rx data

CNA1 - Auxiliary power output: JST S4B-XH-A or compatible (Mating type : XHP-4 or compatible)

PIN	SYMBOL	DESCRIPTION
1	AUX POWER	+12V DC, 500mA max / +24V DC, 3A max
2	GND	Ground
3	GND	Ground
4	AUX 5V	+5V DC, 500mA max

CNB1 – Backlight inverter connector: JST S5B-XH-A or compatible (Mating type : XHP-5 or compatible)

PIN	SYMBOL	DESCRIPTION
1	GND	Ground
2	VBKL	Backlight power supply, +12VDC / +24V DC, 3A max
3	BLCTRL	Backlight On/Off control signal (refer to JB2 & JB3)
4	BVR_WIP	Backlight brightness VR pin WIP
5	BVR_A	Backlight brightness VR pin A

CNC1 – Function controls: JST S12B-XH-A or compatible (Mating type : XHP-12 or compatible)

PIN	SYMBOL	DESCRIPTION
1	PSWIN	Power button A
2	SW_ON	Power button B
3	BVR_A	Backlight Brightness VR pin A
4	BVR_WIP	Backlight Brightness R pin WIP
5	BVR_B	Backlight Brightness VR pin B (470 ohm resistor to +5V Vcc)
6	GND	Ground
7	MENU	OSD menu
8	-/LEFT	OSD -/Left
9	+ /RIGHT	OSD +/Right
10	SEL_DN	OSD Select down
11	SEL_UP	OSD Select up
12	NC	No connection

LED1 – Status LED connector: 3-pin header

PIN	DESCRIPTION
1	Green LED pin (anode)
2	LED pin common (cathode)
3	Red LED pin (anode)

P1 - Analog VGA input – DB-15 way high density 3 row

PIN	SYMBOL	DESCRIPTION
1	PCR	Red, analog
2	PCG	Green, analog
3	PCB	Blue analog
4	ID2	Reserved for monitor ID bit 2 (grounded)
5	DGND	Digital ground
6	AGND	Analog ground red
7	AGND	Analog ground green
8	AGND	Analog ground blue
9	DDC_5V	+5V power supply for DDC (optional)
10	DGND	Digital ground
11	ID0	Reserved for monitor ID bit 0 (grounded)
12	DDC_SDA	DDC serial data
13	HS_IN	Horizontal sync or composite sync, input
14	VS_IN	Vertical sync, input
15	DDC_SCL	DDC serial clock

P2 – DVI-D input

PIN	SYMBOL	DESCRIPTION
1	/RX2	TMDS Data 2-
2	RX2	TMDS Data 2+
3	GND	Digital Ground
4	NC	No connection
5	NC	No connection
6	DVI DDC CLK	DDC Clock
7	DVI DDC DAT	DDC Data
8	DVI VS IN	Analog vertical Sync
9	/RX1	TMDS Data 1-
10	RX1	TMDS Data 1+
11	GND	Digital Ground
12	NC	No connection
13	NC	No connection
14	DVI DDC 5V	+5V power supply for DDC (optional)
15	GND	Ground (+5, Analog H/V Sync)
16	NC	No connection
17	/RX0	TMDS Data 0-
18	RX0	TMDS Data 0+
19	GND	Digital Ground
20	NC	No connection
21	NC	No connection
22	GND	Digital Ground
23	RXC	TMDS Clock+
24	/RXC	TMDS Clock-
25	NC	No connection
26	NC	No connection

PP2 - Power supply

PIN	DESCRIPTION
1	+12VDC 5A max / +24VDC 5A max
2	Ground

CONTROLLER DIMENSIONS

The maximum thickness of the controller is 15.8mm (measured from bottom of PCB to top of components, including any underside components & leads). We recommend clearances of:

- 5mm from bottom of PCB - if mounting on a metal plate we also recommend a layer of suitable insulation material is added to the mounting plate surface.
- 10mm above the components
- 3~5mm around the edges

Any of the holes shown above can be used for mounting the PCB, they are 3.2mm in diameter.

CAUTION: Ensure adequate insulation is provided for all areas of the PCB with special attention to high voltage parts such as the inverter.

APPLICATION NOTES

USING THE CONTROLLER WITHOUT BUTTONS ATTACHED

This is very straightforward by following the steps below :

- Firstly setup the controller/display system with the buttons. With controls attached and display system active make any settings for colour and image position as required then switch everything off.
- Use a jumper to close JP6 jumper, this will fix the board On.
- Refer to inverter specifications for details as to fixing brightness to a desired level, this may require a resistor, an open circuit or closed circuit depending on inverter.

INVERTER CONNECTION

There are potentially 3 issues to consider with inverter connection:

- Power
- Enable
- Brightness

Please read the following sections for a guide to these issues.

Inverter Power: As per the table for CNB1 pin 1 is ground and pin 2 provides DC12V/ 24V DC . This should be matched with the inverter specification: see table.

CNB1	
PIN	DESCRIPTION
1	Ground
2	+12VDC / 24VDC

Remark: For higher power inverter, more current (for 12V / 24V) can be taken from CNA1 pin 1. Maximum current drawn on CNA1 pin 1 and CNB1 pin 2 is 3A (24V) / 3A(12V)

Enable: This is a pin provided on some inverters for On/Off function and is used by this panel controller for VESA DPMS compliance. If the inverter does not have an enable pin or the enable pin is not used then DPMS will not be operational. Pin 3 should be matched to the inverters specification for the 'enable' or 'disable' pin.

CNB1	
PIN	DESCRIPTION
3	Enable

Further, jumpers JB2 & JB3 should be set to match the inverters specification for the enable pin power and High or Low setting: see table.

Ref	Purpose	Note
JB2	Inverter enable voltage	1-2 H = 12V/24V, 2-3 H = 5V (Vcc), OPEN H = open collector
JB3	Inverter control	1-2 H = On, 2-3 L = On

Brightness: There are various methods for brightness control and it is important to consider the specifications for the inverter to be used. Generally the situation is:

- Brightness can controlled by using a resistor or VR (Variable Resistor).
- Brightness controlled by adding a circuit such as PWM (Pulse Width Modulation).
- No adjustment of brightness is possible.

CNB1 pins 4 & 5 are available for connecting to an inverter or circuit where VR control is supported.

CNB1	
PIN	DESCRIPTION
4	VR WIP
5	VR A

This can then be matched with function controls (OSD switch mount) pins 3 & 4: see cable design below .

Design Guideline for making VR circuitry :

Signal description / Notes :

- 1) R1 : 470ohm on board
- 2) RPOT is an external potentiometer (in-line dip style) that can be plugged directly into CNC1 pins 3,4,5. RPOT must be supplied / installed by user.
- 3) BVR_B : Voltage tapped from "top" of potentiometer, the node of R1 and RPOT.
- 4) BVR_WIP : Voltage tapped from wiper arm of RPOT.
- 5) BVR_A : Voltage tapped from "bottom" of RPOT.

Note : BVR_A voltage is left floating on the controller board. To use this circuit, you need to tie this point to a potential (usually GND, available at CNC1 pin 6).

CNC1 – Backlight inverter connector: JST B5B-XH-A (Matching type : XHP-5)

PIN	SYMBOL	DESCRIPTION
1	GND	Ground
2	VBKL	+12VDC / 24VDC, backlight power supply (selected by JA3 & JA6)
3	BLCTRL	On/Off control (enable) – see JB2 & JB3
4	BVR_WIP	Brightness VR - WIP
5	BVR_A	Brightness VR A

CNC1 – Control switch, JST B12B-XH-A (Matching type : XHP-12)

PIN	SYMBOL	DESCRIPTION
1	PSWIN	Power button A
2	SW_ON	Power button B
3	BVR_A	Backlight Brightness VR pin A
4	BVR_WIP	Backlight Brightness R pin WIP
5	BVR_B	Backlight Brightness VR pin B (470 ohm resistor to +5V Vcc)
6	GND	Ground
7	MENU	OSD menu
8	-/LEFT	OSD -/Left
9	+ /RIGHT	OSD +/Right
10	SEL_DN	OSD Select down
11	SEL_UP	OSD Select up
12	NC	No connection

The VR for brightness depends on the inverter. The main power load for On/Off is handled by a relay on the controller.

Example for circuit design :

- 1.) Choose RPOT = 10K
- 2.) Tie BVR_A to GND
- 3.) Circuit analysis gives BVR_WIP as the following (see Figure 1)

$$BVR_WIP = 5 \times (Rbc / 10.47)$$

where BVR_WIP is in Volts.
And Rbc is the resistance from the wiper arm to bottom of pot in Kohms.

To evaluate, plug in different values of Rbc :

Rbc	BVR_WIP
0	0 V
2.5 K	1.2 V
5 K	2.4 V
7.5 K	3.6 V
10 K	4.8 V

So this circuit could provide Brightness adjust voltage ranging from 0V to 5V.

Specifications subject to change without notice

TROUBLESHOOTING

General

A general guide to troubleshooting a flat panel display system it is worth considering the system as separate elements, such as:

- Controller (jumpers, PC settings)
- Panel (controller, cabling, connection, panel, PC settings)
- Backlight (inverter, cabling, backlight tubes)
- Cabling
- Computer system (display settings, operating system)

Through step by step cross checking with instruction manuals and a process of elimination to isolate the problem it is usually possible to clearly identify the problem area.

No image:

- If the panel backlight is not working it may still be possible to just see some image on the display.
- A lack of image is most likely to be caused by incorrect connection, lack of power, failure to provide a signal or incorrect graphic card settings.

Image position:

If it is impossible to position the image correctly, ie the image adjustment controls will not move the image far enough, then test using another graphics card. This situation can occur with a custom graphics card that is not close to standard timings or if something is in the graphics line that may be affecting the signal such as a signal splitter (please note that normally a signal splitter will not have any adverse effect).

Image appearance:

- A faulty panel can have blank lines, failed sections, flickering or flashing display
- Incorrect graphics card refresh rate, resolution or interlaced mode will probably cause the image to be the wrong size, to scroll, flicker badly or possibly even no image.
- Incorrect jumper settings on the controller may cause everything from total failure to incorrect image. CAUTION: Do not set the panel power input incorrectly.
- Sparkling on the display: faulty panel signal cable.

Backlight:

Items to check include: Power input, Controls, Inverter and Tubes generally in this order.

If half the screen is dimmer than the other half:

- Check cabling for the inverter.
- For a specific backlight tube check the AC pins orientation (CAUTION: Never reverse any DC power pins).

Also:

- If adjusting brightness control has no effect the chances are that the VR rating or method of adjusting brightness is not compatible or correctly connected to the inverter.
- If system does not power down when there is a loss of signal

Continued failure:

If unit after unit keeps failing consider and investigate whether you are short circuiting the equipment or doing something else seriously wrong.

Generally after common sense issues have been resolved we recommend step by step substitution of known working parts to isolate the problem.

SPECIFICATIONS

Panel compatibility	1400x900, 1366x768, 1280x1024, 1280x800, 1280x768, 1024 x 768, 1024x600, 800x600, 800x480, 640x480 or 480x234 resolution TFT LVDS or TTL LCD's support.
No. of colours	Up to 3 x 8 bit providing 16.7 million colours.
Vertical refresh rate	SXGA, XGA, SVGA, VGA resolution up to 60Hz.
Dot clock (pixel clock) maximum	135 MHz
Graphics formats	Standard SXGA, XGA, SVGA, VGA
Standard input at source	- VGA analog (15-pin) standard with automatic detection of : Digital Separate Sync Sync-On-Green Composite Sync - DVI-D
Controls available	- On/Off - Brightness (inverter) - OSD menu - OSD select - OSD setting + - OSD setting -
Control interface	- Buttons
Settings memory	Settings are stored in non volatile memory
Language OSD support	Graphics OSD icons
VESA DPMS implementation	Yes
Plug & Play	VESA DDC 1, 2/b compatible
Voltage output for LCD	+3.3V , +5V, +12V, +18V The current drawn for 18V panel from 24VDC power input is limited to 2A. The current drawn for 3.3V, 5V or 12V panel from 12V/24VDC power input is limited to 3A.
Input voltage	12VDC , 5A max / 24VDC 5A max +/- 5%
Controller power consumption	Approx 4W (controller logic only, no panel and inverter are involved)
Controller dimensions	107mm x 92mm x 21mm
Storage temperature limits	-40°C to +70°C
Operating temperature limits	0°C to +60°C

NOTES

Please note the following:

- For specific panel setup a sample of an LCD may be required (this will be returned) and a copy of the full technical specifications for the panel from the manufacturer.
- Relayout and custom development services are available.

Appendix I – Graphic Mode Support Table

Mode	Resolution	Clk [MHz]	Horizontal freq [KHz]	Vertical freq [Hz]	Sync Mode
E1_70	640x350 70Hz	25.175	31.469	70.087	Digital Separate Sync
E2_70	640x400 70Hz	25.175	31.469	70.087	Digital Separate Sync
V_60	640x480 60Hz	25.175	31.469	59.940	Digital Separate Sync
V_60	640x480 60Hz	25.175	31.469	59.940	Sync On Green
V_60	640x480 60Hz	25.175	31.469	59.940	Composite Sync
SV_56	800x600 56Hz	36.000	35.156	56.250	Digital Separate Sync
SV_56	800x600 56Hz	36.000	35.156	56.250	Sync On Green
SV_56	800x600 56Hz	36.000	35.156	56.250	Composite Sync
SV_60	800x600 60Hz	40.000	37.879	60.317	Digital Separate Sync
SV_60	800x600 60Hz	40.000	37.879	60.317	Sync On Green
SV_60	800x600 60Hz	40.000	37.879	60.317	Composite Sync
X_60	1024x768 60Hz	65.000	48.363	60.004	Digital Separate Sync
X_60	1024x768 60Hz	65.000	48.363	60.004	Sync On Green
X_60	1024x768 60Hz	65.000	48.363	60.004	Composite Sync
SX_60	1280x1024 60Hz	108	63.81	60.020	Digital Separate Sync
SX_60	1280x1024 60Hz	108	63.81	60.020	Sync On Green
SX_60	1280x1024 60Hz	108	63.81	60.020	Composite Sync

Remark :

The controller has been designed to take a very wide range of input signals however to optimize the PC's graphics performance we recommend choosing 60Hz vertical refresh rate. To support on higher refresh rate over 60Hz, the LCD panel may not support.

Appendix II – RS-232 control protocols

RS-232 Serial control (Baud rate 2400, 8 bits, 1 stop bit and no parity)

Physical connection :

Controller side
Connector interface : CN8
Mating connector : JST XHP-6

Computer side
Connector interface : Serial port
Mating connector : DB9 Female

PIN#	Description
4	RS-232 Tx Data
5	Ground
6	RS-232 Rx Data

PIN#	Description
2	RS-232 Rx Data
3	RS-232 Tx Data
5	Ground

Remark :

(1) : RS-232 connection cable, 600mm P/N 4260902-00 can be ordered separately for connection.

Software connection :

The OSD function can be controlled through sending the RS-232 protocol.
The RS-232 program can be custom-made to fit for application or it can be used the program provided by Digitalview on request. Please contact your local sales for informations.

1. Commands to implement switch mount control buttons

Function	Command	Description	Acknowledge (if enabled)
OSD Menu Lock	0xf6	OSD menu Lock Off / OSD menu Lock On	Button equivalent
Menu	0xf7	Menu button pressed	Button equivalent

3. Other control

Function	Command	Description	Acknowledge (if enabled)
Select RS-232 acknowledge	0xc1, "0" "1"	Disable/enable command acknowledge.	"0" – acknowledge disabled. "1" – acknowledge enabled.
Auto-setup [#]	0xc3	Start auto-setup of current mode.	"0" – fail. "1" – successful.
Command availability	0xc4, n	Check whether a command is available.	"0" – not available. "1" – available.
Auto-calibration [#]	0xc5	Start auto-calibration of gain of the RGB amplifier.	"0" – fail. "1" – successful.
Query BIOS version	0xcb, "0"	Read BIOS version	"nnnn" = BIOS ver. "nn.nn"
Query PCBA number	0xcb, "1"	Read PCBA number	"nnnn" = PCBA number ALR-1400="41710"
Load factory defaults	0xce	Reset all parameters to factory default value	"1" – successful.

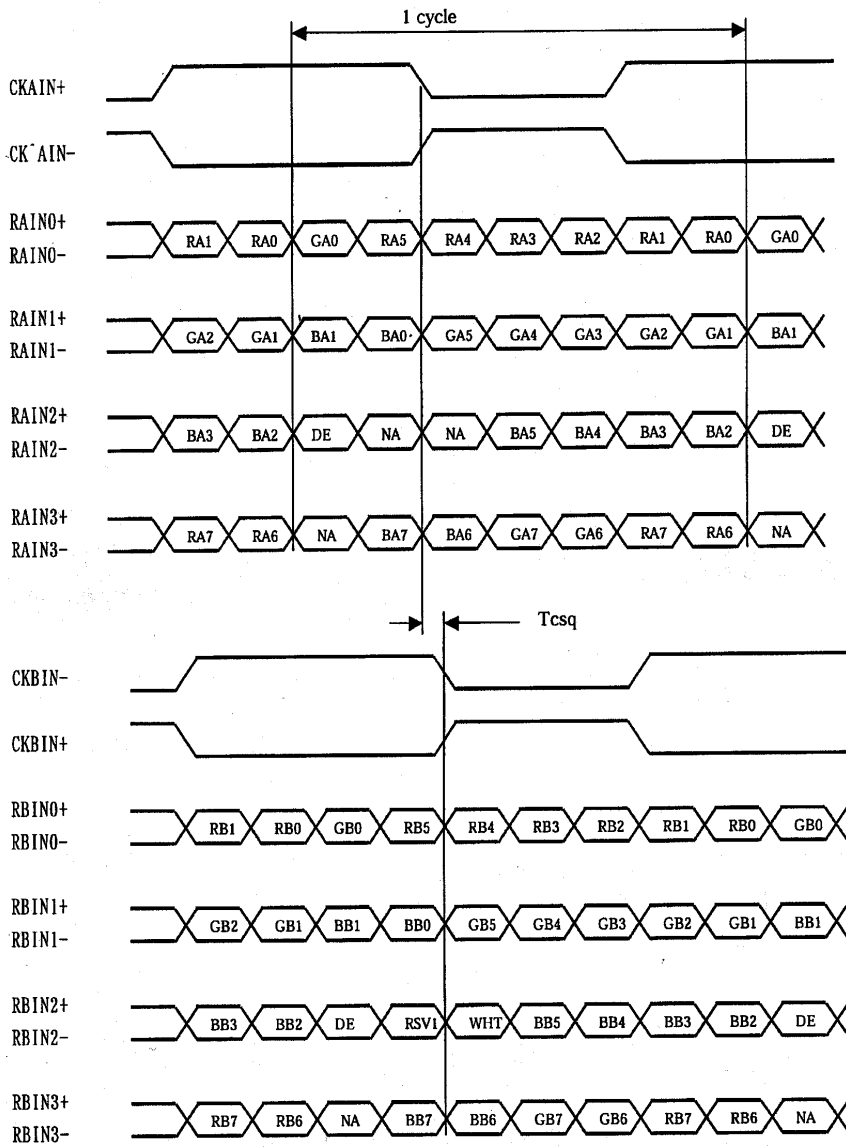

- Function in ARGB mode only

Appendix III – Mapping definition

- Definition of Mapping A :

- Definition of Mapping B :

Appendix IV – Auto Color Gain

The Auto Color Gain function is supported in the ARGB mode only and is designed to calibrate the controller to the incoming video signal. In order to calibrate correctly, the display must be displaying an image containing both black and white data (see illustration below) when the function is used. The internal processor of the video controller chip will then execute a process to adjust the relative values of the RGB signals to achieve the best performance. The parameters of the corrected RGB values are then stored in the controller and are unaffected by the Reset Factory Defaults function.

Warning - If the Auto Color Gain is executed without an appropriate image being displayed, then the process will set incorrect values and the display colors will be distorted. If this occurs, then it can either be corrected by performing the process correctly or if this is not possible then the Reset Color Gain function can be used. This function will reset the stored RGB values to a set of approximate values.

WARRANTY

The products are warranted against defects in workmanship and material for a period of three (3) year from the date of purchase provided no modifications are made to it and it is operated under normal conditions and in compliance with the instruction manual.

The warranty does not apply to:

- Product that has been installed incorrectly, this specifically includes but is not limited to cases where electrical short circuit is caused.
- Product that has been altered or repaired except by the manufacturer (or with the manufacturer's consent).
- Product that has subjected to misuse, accidents, abuse, negligence or unusual stress whether physical or electrical.
- Ordinary wear and tear.

Except for the above express warranties, the manufacturer disclaims all warranties on products furnished hereunder, including all implied warranties of merchantability and fitness for a particular application or purpose. The stated express warranties are in lieu of all obligations or liabilities on the part of the manufacturer for damages, including but not limited to special, indirect consequential damages arising out of or in connection with the use of or performance of the products.

CAUTION

Whilst care has been taken to provide as much detail as possible for use of this product it cannot be relied upon as an exhaustive source of information. This product is for use by suitably qualified persons who understand the nature of the work they are doing and are able to take suitable precautions and design and produce a product that is safe and meets regulatory requirements.

LIMITATION OF LIABILITY

The manufacturer's liability for damages to customer or others resulting from the use of any product supplied hereunder shall in no event exceed the purchase price of said product.
